

Boomi Embedded

Build less. Connect more.

Boomi Embedded is an embedded integration platform that lets you offer your customers native integrations directly inside your product. Unlike traditional integrations, which can take months for developers to build manually, Boomi Embedded offers the power of the Boomi Enterprise Platform, delivering integrations in hours, making your product stickier, and accelerating your business growth.

AI innovation starts with integration, and without the ability to leverage data across systems, it's hard to realize the true potential of AI. As businesses continue to consolidate their tech stacks, this leaves you at risk of falling behind. An integrated product ensures you are deeply connected in your customers' ecosystems and delivering real value.
